**Things To Get Done by Thursday**
- ☐ Translate html/css to hbs
- ☐ Home page
- ☐ Events page
- ☐ Buy page
    - ☐ Can stub out actual events with fake events in just text boxes instead of actually putting things on the database
        - ☐ Future we can use hbs partials or use hbs for loops to display events on pages
- ☐ Sell page
- ☐ Account page
- ☐ Bid Page

We wanted to generally get through all of the front end– we took these tasks, discussed stubbing as described above, and then took the tasks and distributed them evenly as shown on the project board.
